

Gatecrasher Modular™

The Gatecrasher Modular™ is a modular water-tamped frame charge system used to breach thick concrete or brick walls, the modular alternative to the powerful and rigid Gatecrasher™ system.

Gatecrasher Modular™ consists of straight charge modules which are used in arrays to build charges of different sizes and loads. When used in conjunction with the optional Tactical Sleeve, charges may be prepared and rolled up ready for rapid deployment.

Available in two versions, the Gatecrasher Modular™ Type 1 has three square recesses into which layers of sheet explosive are loaded, used to make a 'shooting hole' or if used in a larger array to penetrate walls. Gatecrasher Modular™ Type 2 has a specifically designed linear cutting charge which cuts into the target giving a greater kick.

Features include:

- > Low NEQ and powerful explosive effect
- > Available in two variants
- > Highly modular, portable & space-saving
- > Easy to set up and deploy

Gatecrasher Modular™ Type 1

The Type 1 version has 3 x 15mm pockets which can accommodate sheet explosive. Plastic explosive such as C4 or PE4 may also be used. The NEQ of each module can be varied from 20g to 180g depending upon requirement. Used to breach walls or other solid structures.

Gatecrasher Modular™ Type 2

The Type 2 version has a specially designed linear cutting charge with an NEQ of 300g. This version cuts the target, severing re-bars making the charge far more powerful. The copper may be removed and the cavity completely filled with explosive. A bundle of cut lengths of detonating cord can also be used.

Configuring

Individual modules may be loaded and used in any configuration required. Strong points at each end allow modules to be attached to each other with cord or wire, and a profile on the back of the charges enables easy fixing with prop-sticks. The normal configuration for a charge is 4 modules (as provided in a set). The charges come with packs of Detcord Clips™ for connecting detonating cord and detonators.

Tactical Sleeve

The Tactical Sleeve is a nylon sleeve with pockets into which the charge modules are inserted. The individual pockets can be repositioned on the sleeve as required. Straps allow for the sleeve to be positioned at a target using a prop.

Specifications

Charge Width	0.6m (24")
Height (4 modules)	1.2m (48")
Weight (per module)	3.75kg (8lb)
Min. NEQ Type 1 (per module)	20g (0.7oz)
Max NEQ Type 1	180g (6.5oz)
NEQ Type 2	300g (10.5oz)

Gatecrasher Modular™ Detcord Rig

Gatecrasher Modular™ Type 1 top, Type 2 bottom
